

AYUSH JAISWAL

Backend Developer | Backend & DevOps | Node.js | Linux | CI/CD

Navi Mumbai, India | 8574751574 | ayushjaiswal.jobs@gmail.com | [linkedin.com/in/ayushjaiswal8574](https://www.linkedin.com/in/ayushjaiswal8574) | ayushjaiswaldev.netlify.app/

PROFESSIONAL SUMMARY

Backend and DevOps-focused Software Developer with 3+ years of experience building, deploying, and supporting production applications across backend development, Linux server administration, CI/CD, and deployment infrastructure. Hands-on experience with Node.js, Express.js, REST APIs, MySQL, MongoDB, Linux, Git, Jenkins, Docker, Shell scripting, SSH, and automated server jobs. Experienced in designing and managing deployment architecture across development, SIT, and production environments, including server configuration, CI/CD pipelines, scheduled jobs, application deployments, and production operations in restricted and no-internet environments. Built enterprise data-processing and reconciliation systems handling 12L+ rows and reduced data refresh time from 20 minutes to 3 minutes (85%) through query optimization, indexing, and bulk data loading.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), SQL, Java, Shell Scripting

Backend: Node.js, Express.js, REST APIs, Middleware, MVC Architecture, Authentication, Authorization, LDAP, JWT, RBAC, Session Management, Rate Limiting

Databases: MySQL, MongoDB, Mongoose, SQL Query Optimization, Indexing, Transactions, Schema Design, Data Validation, Bulk Data Processing

DevOps & CI/CD: Git, Jenkins, CI/CD Pipelines, Docker, Cron Jobs, Shell Scripting, Deployment Automation, SSH, Server Administration

Infrastructure & Systems: Linux, Server Configuration, Multi-Environment Deployment, Proxy Configuration, Production Operations, Logging, Monitoring, Troubleshooting

Cloud & Tools: AWS (EC2, EBS, ELB, S3, Lambda, IAM), GitHub, Postman, VS Code

Testing & Production: Unit Testing, Production Deployment, Performance Optimization, Database Migration, Backup & Recovery

PROFESSIONAL EXPERIENCE

Software Developer – Associate Tech Operations | Jio Platforms Limited | Jan 2024 – Present

- Manage backend development, Linux server administration, deployment infrastructure, CI/CD, production operations, and application support across development, SIT, and production environments.
- Designed and managed the server-side deployment architecture, including Linux server configuration, Git repository setup, Jenkins CI/CD infrastructure, Docker, SSH connectivity between environments, scheduled backend jobs, and deployment workflows.
- Established Git infrastructure and repository setup on blank Linux servers, and installed and configured Jenkins to build the CI/CD architecture supporting application deployment across multiple environments.
- Installed and configured Docker on application servers and established SSH-based connectivity between servers across development, SIT, and production environments.
- Automated recurring backend and operational workflows using Cron and Shell scripts, including scheduled jobs, data processing, application operations, and deployment-related tasks in restricted/no-internet environments with proxy-based connectivity where required.
- Troubleshoot and manage production servers, backend processes, deployments, application compatibility issues, logging, monitoring, database migrations, and operational incidents across the application lifecycle.

Atlas Portal — Enterprise Reconciliation & Data Automation Platform

- Designed and built a greenfield production platform using Node.js, Express.js, EJS, and MySQL for enterprise server configuration reconciliation and audit workflows.
- Optimized high-volume MySQL processing using indexing, query optimization, and LOAD DATA INFILE, reducing data refresh time from 20 minutes to 3 minutes (85% improvement).
- Engineered recurring ingestion workflows processing 4K–125K rows per cycle and 12L+ rows through data flows, consolidating data from multiple sources into normalized MySQL datasets.

- Automated data cleaning and database update workflows, reducing manual operational effort by 70–90%.
- Implemented enterprise authentication and authorization using LDAP, RBAC, middleware, session management, and rate limiting, along with validation, logging, monitoring, database migrations, and recovery safeguards.

MACD Portal — Enterprise Server Onboarding Workflow System

- Maintained and enhanced a Python-based backend system supporting 200–300 monthly server-onboarding requests for provisioning into HP Asset Manager.
- Implemented SLA-driven workflow controls, structured validation, access-control enforcement, automated email notifications, and ticket lifecycle tracking to reduce manual coordination across cross-functional teams.

Software Developer Intern | Persistent Systems | Jan 2023 – Jun 2023

- Developed modular backend applications using Java and MySQL, implementing CRUD operations and relational database schema design.
- Built frontend interfaces using HTML, CSS, and JavaScript, gaining experience with full-stack application integration.
- Applied Git workflows, modular coding practices, and clean architecture principles during application development.

PROJECTS

FinLedger — Personal Finance Management Application

Node.js | Express.js | MongoDB | Mongoose | React | JWT | REST APIs

Live: <https://finledgerai.vercel.app/>

- Developed a full-stack personal finance application with a Node.js/Express REST API and React client using a separate client-server architecture.
- Implemented secure authentication and authorization using short-lived JWT access tokens, refresh tokens, HTTP-only cookies, and protected API routes.
- Designed MongoDB/Mongoose data models and structured the backend using controllers, routes, middleware, services, models, and utility layers.
- Implemented API validation, transaction CRUD operations, token refresh workflows, environment-based configuration, and production deployment using Render and Vercel.

BookCatalog — Secure REST API

Node.js | Express.js | MongoDB | Mongoose | JWT

Live: <https://bookcatalog-zphe.onrender.com/> | GitHub: <https://github.com/AyushJaiswal0122/BookCatalog>

- Developed and deployed a secure REST API using Node.js, Express.js, MongoDB, and Mongoose with JWT-based authentication.
- Implemented protected routes, middleware-based authorization, bcrypt password hashing, and token-validation workflows.
- Structured the application using modular route-controller architecture and deployed the application on Render with environment-based configuration.

EDUCATION

Bachelor of Engineering — Information Technology

Savitribai Phule Pune University

CGPA: 8.73 / 10

CERTIFICATIONS & PUBLICATION

Certifications: AI Tools Workshop Certification · MongoDB Essential Training · Bootstrap 4 Essential Training · JavaScript for Web Designers

Publication: *Design and Development of Internet Voting System*
