

AYUSH JAISWAL

Full Stack Developer (MERN) | Backend Engineer (Node.js, MySQL, React)

Navi Mumbai, India

8574751574 | ayushjaiswal.jobs@gmail.com | linkedin.com/in/ayush-jaiswal

PROFESSIONAL SUMMARY

Backend-focused Full Stack Developer with 2+ years of experience designing scalable REST APIs, implementing secure LDAP based enterprise authentication, and optimizing high-volume MySQL architectures. Improved system performance by 85% (20 → 3 min) and reduced manual operational workload by 70–90% through cron-driven automation and data validation pipelines. Experienced in owning production systems end-to-end, including schema design, access control enforcement, and performance monitoring.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Java, SQL, HTML5, CSS3

Backend: Node.js, Express.js, RESTful APIs, Middleware Architecture, Authentication (LDAP, JWT), RBAC, Session Management, Cron Jobs

Frontend: React, EJS, Tailwind CSS

Databases: MySQL (Indexing, Query Optimization, Transactions, Schema Design), MongoDB, Mongoose, Oracle (Basic)

Dev Tools: Git, Postman, Linux (basic server commands), VS Code

Concepts: API Security, Data Validation, Performance Optimization, MVC Architecture, Production Deployment, Logging & Monitoring

PROFESSIONAL EXPERIENCE

Software Developer – Associate Tech Operations

Jio Platforms Limited | Jan 2024 – Present

Atlas Portal – Enterprise Reconciliation & Data Automation Platform

- Architected and built a production-grade internal reconciliation platform using **Node.js, Express.js, EJS, and MySQL**, used by operations and audit teams to manage enterprise server configuration data.
- Designed normalized **MySQL schema with indexing, transactions, and optimized query patterns**, reducing data refresh time from **20 minutes to 3 minutes (85% improvement)** across high-volume tables.
- Engineered cron-based ingestion pipelines processing **4K–125K rows per cycle (1.1M+ total records)**, replacing manual Excel-driven workflows and eliminating **70–90% operational effort**.
- Implemented **LDAP based authentication**, role-based access control (RBAC), module-level authorization middleware, session management, and rate limiting to enforce enterprise security standards.
- Built structured validation pipelines to transform large unstructured data dumps into normalized relational datasets with rollback and backup safeguards.
- Designed fail-safe ingestion architecture with backup tables, logging, and recovery strategies to prevent audit impacting data corruption.
- Owned the system end-to-end in production, including deployment coordination, issue triaging, performance monitoring, and stakeholder demos.

MACD Portal – Enterprise Server Onboarding Workflow System

- Maintain and enhance a Python-based backend system managing **200–300 monthly onboarding requests** for server provisioning into HP Asset Manager.

- Implemented SLA-driven workflow controls, structured validation logic, access control enforcement, and automated email notifications to improve compliance transparency.
- Optimized ticket lifecycle tracking and approval flows, reducing manual coordination bottlenecks across cross functional teams.

Software Developer Intern

Persistent Systems | Jan 2023 – Jun 2023

- Completed structured training in Java-based backend development and relational database systems.
- Developed modular applications using Java and MySQL with CRUD operations and schema design.
- Built frontend interfaces using HTML, CSS, and JavaScript to understand full-stack integration fundamentals.
- Practiced Git workflows, modular coding, and clean architecture patterns.

PROJECTS

BookCatalog – Secure REST API (Node.js + JWT)

GitHub: github.com/AyushJaiswal0122/BookCatalog

Link: bookcatalog-zphe.onrender.com/

- Developed a secure RESTful API using Node.js, Express, and MongoDB (Mongoose) implementing **token-based authentication** for stateless session management.
- Built JWT-based access control with protected route middleware to restrict unauthorized access to book resources.
- Secured user credentials using bcrypt hashing and structured authentication workflows with access token validation.
- Designed modular route-controller architecture ensuring maintainable and scalable backend structure.
- Deployed the application on Render with production-ready environment configuration.

PocketNotes – React Application

GitHub: github.com/AyushJaiswal0122/PocketNotes

Link: mypocketnotesapp.netlify.app/

- Built a responsive React application with Local Storage persistence for offline note retention.
- Executed group-based note isolation ensuring strict data separation across categories.
- Optimized state handling and useEffect dependencies to prevent unnecessary re-renders.
- Created scalable component structure supporting 100+ notes with validation and edge-case handling.

EDUCATION

Bachelor of Engineering (Information Technology)

Savitribai Phule Pune University

CGPA: 8.73 / 10
